

## Elegant design, advanced technology: Upgraded wall-mounted heat pump indoor unit for retailers coming soon

Daikin has announced the release of an updated version of its FAA-B wall-mounted indoor unit available from early 2022. It has been designed for the use with the company's full line-up of Sky Air A-series R-32 heat pumps.

**Vienna, December 2021** – For the retail sector, lowering its environmental impact becomes more and more important, with the decarbonization of building premises being one of the primary goals. Daikin's new wall mounted indoor unit offers an appealing package of advanced technology and elegant design. It is easy to install, intuitive to control and makes energy-saving heat pump technology accessible to all types of retail outlets to replace traditional boiler systems.

### Versatile design options

The new model provides installers and designers optimum flexibility in design and location when connected to the Sky Air Alpha-series outdoor unit with long piping lengths up to 85 metres and a wide operation range down to -20°C. An optional sound enclosure can reduce outdoor sound power by up to -10dB(A), allowing the combination to be installed in any location, even city centres and mixed urban areas subject to strict noise regulation.

### World class performance

Through connection to the complete range of Sky Air A-Series outdoor units – the widest R-32 refrigerant portfolio available in the market – the system offers a future-proof solution with lower Global Warming Potential that greatly reduces environmental impact compared to traditional systems using R-410A refrigerant.

## Total Control

With Daikin's optional smart eco-control Onecta app optimising the indoor environment is easy. Onecta is the updated version of the Daikin Residential Controller app available in app stores soon. Online control and scheduling helps to maximise energy efficiency, while assuring the comfort of staff and shoppers.
